Good Looking With Extra

Fielders is proud to be the exclusive Australian supplier of a superior new coated steel, **Colorcoat HPS200®**.

Designed for superior and long-lasting performance, it also has a subtly textured appearance to enhance your design applications.

Colorcoat HPS200® is extremely versatile and available in Corrugated S-Rib, TL-5, Spanform, Mini-Flute, KingKlip® and WideKlip® 760 as well as Fascia, Weatherboard and the full range of Fielders' gutters (subject to minimum manufacturing quantities).

The thicker your coat, the less you wear.

Colorcoat HPS200® has an advanced tough polymer-rich paint coating which is superior to the industry benchmark, PVF2. Colour and gloss are retained year after year demonstrating the outstanding durability of this unique product. Its high resistance to build up of mould is another excellent benefit.

A number of factors including environmental and economic will determine which of the following 3 options is selected:

HPS200® (Standard In-Stock Item at Fielders)

The weather side of the sheet (topcoat) is 200 microns thick which is 8 times thicker than most other coatings on painted steel roll formed products. The backing coat is up to 15 microns thick.

HPS200®C

The topcoat is the same as the standard offer, however the backing coat is 100 microns thick up to 8 times thicker than most other coatings. This is ideal for environments that are tough on the exposed reverse side of sheets such as coastal areas.

HPS200® Double Sided

The description is self explanatory, both the topcoat and the backing coat are manufactured with the exclusive 200 micron coating. This is excellent for use when there is high humidity, chemical pollution within the building or in severe marine environments.

Galvalloy substrate.

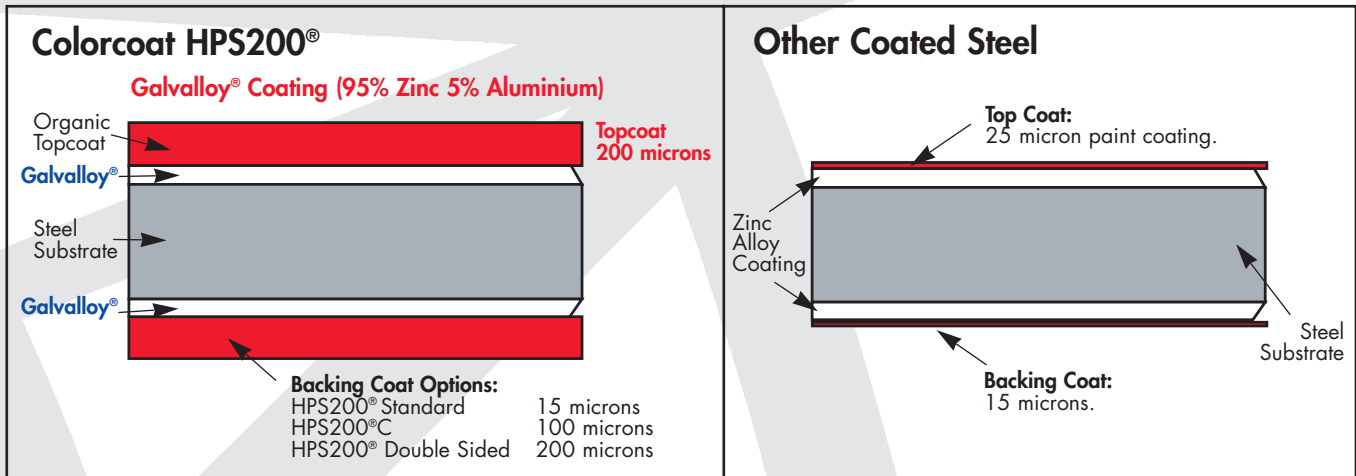

The performance of **Colorcoat HPS200®** is confirmed by 28 test sites around the world, including Arizona, Portugal, Norway and Hong Kong in all sorts of building types and environments. Corus (formally British Steel) creates the robust and stable '**Galvalloy®**' base by hot-dip coating strip steel with an alloy of almost 95% zinc and 5% aluminium (small amounts of other elements complete the formula). The resulting base imparts several key benefits to **Colorcoat HPS200®**.

- **Enhanced cut edge protection.**
- **Improved ability to be accurately shaped to the desired profile.**
- **Strengthened paint adhesion.**

Colorcoat HPS200® is available in 0.45 BMT Hi-tensile coil and 0.55 BMT 'soft feed' suitable for Fielders' Hart Corrugated & Mini-Flute Curving.

* Colorcoat®, Galvalloy®, HPS200® and Scintilla® are registered trademarks of Corus.

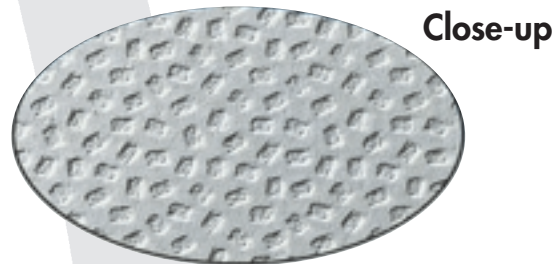

Extraordinary Lasting Power.

Unique patterned steel you can feel.

The micro-textured 'Scintilla®' surface was developed after consultation with architects, to create subtle visual effects that vary with the direction and intensity of light.

Decorative profiles are enhanced by the play of light on different surface angles.

Colours to blend or make a statement.

Whether your design calls for muted shades to harmonise with the Australian environment, or bold colours for striking visual impact, **Colorcoat HPS200®** is the answer.

Ask Fielders about the availability of the latest colour range.

Guaranteed for a generation.

Colorcoat has been used extensively throughout the world in all environments for many years. It has stood the test of time and its performance is guaranteed even in the harsh Australian environment. Fielders and Corus have combined to offer a guarantee up to 25 years on the substrate in normal conditions and up to 15 years in marine environments*. With **HPS200®** we'll guarantee you will 'Finish on top with Fielders'.

* subject to conditions.

NOW THE ROOFING AND FASTENING SOLUTION THAT WON'T EAT AWAY AT YOU.

FINISH ON TOP WITH FIELDERS

Fielders and Powers Fasteners have combined Europe's premium material manufacturers to finally answer the problems associated with fixing coated steel products at the waters edge.

Fielders are the exclusive agent for the innovative **HPS200**[®] coated steel manufactured by Corus (formerly British Steel). **HPS200**[®] has been used worldwide for 20 years in all sorts of environments and is considered the most durable coated steel product on the global market.

What's more, unlike locally manufactured coated steel, Fielders will offer a warranty on the complete system when used with SFS Austenitic Stainless Screws from Powers Fasteners. Available in either hexagon head or the innovative Irius drive style that provides tamper resistant, low profile aesthetic screws, these blend with your design for the best looking and most durable system.
