

ANGLECUT.

FIELDERS ■ a smarter way to lay

The proven solution in pre-cut steel roofing.

FINISH ON TOP WITH FIELDERS STEEL ROOFING

Fielders AngleCut.

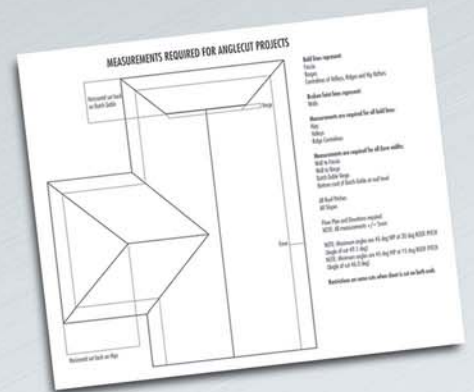

The industry standard pre-cut roofing system from Australia's steel innovators.

Faster. More accurate. Cleaner. Safer. Roofers all over Australia have embraced the benefits of Fielders AngleCut and made their businesses more productive and profitable as a result. If you're still cutting your own, it's time to put down the nibbler and get up to speed with a smarter way to lay.

Quick. Smart. Three simple steps to getting ahead with **Fielders AngleCut.**

Step 1.

Smart ordering with Roof Wizard. Roof Wizard is the brains behind AngleCut. The roofer simply supplies critical roof measurements to Fielders using the AngleCut checklist supplied for every order. At the Fielders estimating office, these measurements are entered into the Roof Wizard software, which then uses a unique modelling system to generate a laying sequence sheet and roll forming data.

Step 2.

Smart cutting means AngleCut does it for you. The Roof Wizard data is passed on to the AngleCut machine, which cuts each steel sheet to size as it emerges from the roll former. A patented blade system means that cuts are made smoothly, accurately and with no burrs creating a safer working edge. The AngleCut machine also prints each sheet with a laying sequence number, the process is clear and simple with no room for mix-ups.

Step 3.

Smart laying – it all goes great with a guide. Each AngleCut order is delivered in stacks, and each order comes complete with an instruction sheet, as well as a laying guide specific to the individual job. Instructions are clear, concise and simple. With the AngleCut stacks arranged in the most convenient positions, each plane is laid using a specific reference sheet as a starting point. With amazing accuracy and virtually no cutting to be done, progress is quick, neat, and safe. The average roofer finishes much faster, cuts out clean-up time, and becomes more profitable through greater efficiency.

The Fielders AngleCut benefits at a glance.

FEATURES	BENEFIT
A roof take-off is provided from your plans.	You save time and money on quoting jobs.
Supplied pre-cut to length and angles.	Quick to install. Saves up to 30% on labour times.
Supplied with a comprehensive laying guide custom-matched to your plan - unique to Fielders.	Easy to understand and follow.
Made to suit roofs pitched between 12 degrees and 30 degrees.	Suitable for use on 95% of new domestic roofs.
Ridge, gutter and flashing take-off also supplied as part of laying guide.	Saves you even more time and effort.
Available in a full range of colours, finishes and gauges.	Excellent flexibility in design choices.

Fielders AngleCut. Cut to the chase and get real business benefits.

AngleCut is faster.

Fielders trials have shown that when compared to traditional block-cut roofing methods, the AngleCut process returns time savings of up to as 30%. Independent comparisons conducted by Bluescope Steel mirror these results.

AngleCut is more accurate.

With careful measurements supplied to Roof Wizard, AngleCut cuts are more accurate, and sheet fitting is more precise.

AngleCut means less clean up.

Messy and dangerous offcuts become a thing of the past. AngleCut makes every job as close as possible to a "walk away" prospect at completion, with virtually no clean-up time.

AngleCut is safer.

Cleaner cuts mean less injuries and downtime. No cutting on-site means less likelihood of falls and serious injuries. Virtually no nibbler or snip work means a better future with far less risk of cuts and repetitive stress injuries.

AngleCut. Support is part of the package.

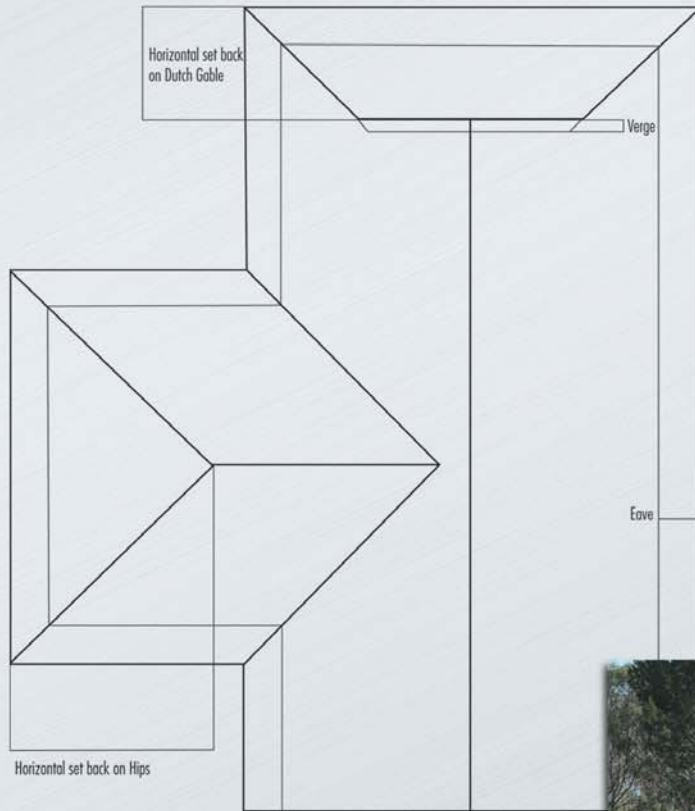

There is no other system in Australia that offers the benefits that AngleCut does. The AngleCut system includes full support, with Fielders specialist staff able to attend on-site should they be needed, and telephone support always available.

Easy to order and simple to fix, the Fielders AngleCut system sees many roofers fitting their first order without the need for help, and most flying solo after assistance with the first job.

Measuring up for AngleCut.

Any roofer who can tackle a tape measure can easily take and supply the measurements needed for Roof Wizard to complete an AngleCut order. Below is an example diagram specifying which critical measurements need to be made.

MEASUREMENTS REQUIRED FOR ANGLECUT PROJECTS

Bold lines represent:
Fascia
Barges
Centrelines of Valleys, Ridges and Hip Rafters

Broken faint lines represent:
Walls

Measurements are required for all bold lines:

Hips
Valleys
Ridge Centrelines

Measurements are required for all Eave widths:

Wall to Fascia
Wall to Barge
Dutch Gable Verge
Bottom cord of Dutch Gable at roof level

All Roof Pitches
All Slopes

Floor Plan and Elevations required

NOTE: All measurements +/- 5mm

NOTE: Maximum angles are 45 deg HIP at 30 deg ROOF PITCH
(Angle of cut 49.1 deg)

NOTE: Minimum angles are 45 deg HIP at 15 deg ROOF PITCH
(Angle of cut 46.0 deg)

Restrictions on some cuts when sheet is cut on both ends

Fielders AngleCut. Get smart. Get up to speed.

Now widely embraced as Australia's perfect pre-cut steel roofing system, Fielders Anglecut is poised to overtake traditional block-cut steel roofing as the industry standard. With a host of demonstrable advantages over the old ways, Fielders AngleCut has the potential to make any roofing team faster, more efficient, more profitable and less injury-prone. Don't get left behind. Get up to speed. Call your Fielders AngleCut representative to find out more now.
