

KINGFLOR®

STRONG SAVINGS

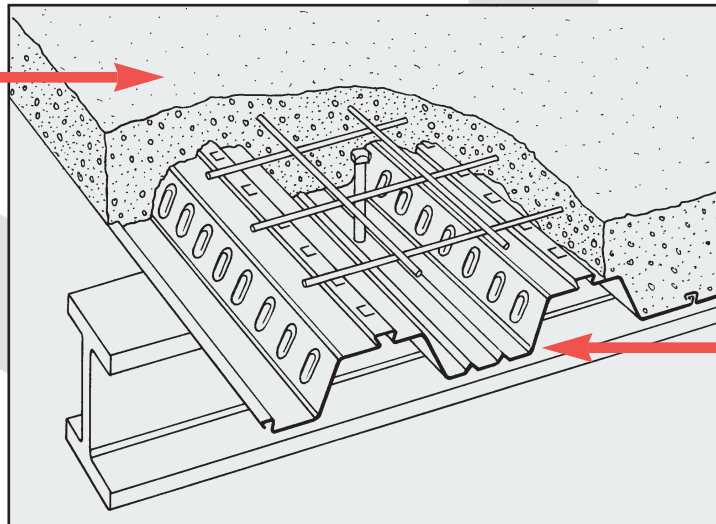

Around the world 'trapezoidal decks' are the smartest choice in steel formwork. Fielders KF70® is the most optimal profile to maximise slab strength and spanning capabilities.

KF70® provides all the benefits of...

- Huge savings in concrete (up to 20%)
- A strong suspended slab
- Less deflection under wet concrete load
- Long spans without temporary propping

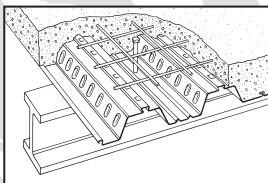

Compared to traditional profiles, **KF70® saves 65kg of concrete per square metre of floor area.**

65kg less concrete for every square metre of floor.

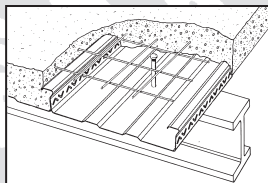

An even distribution of steel in the bottom region of the slab provides strength and stiffness.

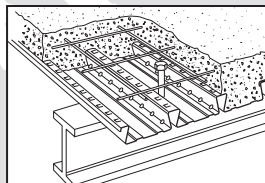

Less concrete means less dead load on your supporting structure and foundations providing a more efficient and cost effective structure.
